

PRIVACY AND LIGHT OPTIONS

[for Natural Woven Shades™]

»privacy and light options...

There is a beautiful luminous quality to light filtered through Natural Woven Shades. Most of the patterns are woven in an open weave that celebrates their natural materials. While the shades provide a good deal of privacy during the day, at night the open weaves are not completely private.

If you need complete privacy or room darkening light control, there are several options for you to consider below that allow you to specify the light transmittance, privacy, and control needed for your home.

STANDARD

The standard shade configuration is unlined as shown.

Most patterns gently filter light.

PRIVACY LINER

A lining is expertly sewn to the back of the shade. This provides full privacy and a uniform color facing the street.

Lining is available in a variety of colors. See our linings sample deck in the back of your Natural Woven Shades fabric swatch binder.

BLACKOUT LINER

A blackout lining is expertly sewn to the back of the shade. This blocks almost all light coming through the material.

Blackout liners are available in a variety of colors. Check out our blackout lining options in the back of our Natural Woven Shades fabric swatch binder.

DUOSHADE

A roll shade behind the Roman shade is available in translucent privacy fabric (shown) or blackout fabrics. Makes any shade private as needed.

A variety of privacy and blackout shade fabrics are offered. See our duoshades sample deck in the back of our Natural Woven Shades fabric swatch binder.

»lining options...

Choose from 11 different linings. See the back of our Natural Woven Shades Sample Book for all our lining options.

Our PRIVACY linings allow light to come through, but do not allow visual access. Our BLACKOUT linings will block most of the light for sleeping comfort.
