safer shades™ guide

Because we care about the well-being of children, we are committed to offering window covering products that make our shades safer. For that reason, we have designed **Safer Shades** with features that meet or exceed the Window Covering Manufacturer Association's (WCMA/ANSI) recommendation. When selling shades in a home with small children, alert your customer to the availability of **Safer Shades** from Fabritec.

SAFER SHADE FEATURES

- Folding Shades (or Roman shades) have lift cords on the back for raising and lowering the shades. To eliminate danger to small children, all Safer Shades are constructed with special Loop-Control Cords on the back, which limits the distance between pleats in a way that prevents small children from creating a loop large enough to put their head through.
- Our standard pull cords are knotted every 6 inches. This spacing is close enough to prevent danger to children. We can also braid the cords at your request. However, knotted cords are a little easier to grab and pull. Both methods are acceptable with Safer Shades.
- The pleat spacing has been adjusted to meet the Safer Shade standards.
- We have developed a variety of the Safer Shade lifting options. Below, we have detailed features of each of these lifting systems to help in deciding the best option for a specific situation.

MANUALLY OPERATED SAFER FOLDING SHADES

Cordless Lifting System: This Safer Shade does not require a pull cord to lift the shade. Gently tug on the pull ring and the shade will rise to whatever level you choose. The advantage of this shade is that there is never any dangling cord to worry about. The maximum size of the shade you can lift with this system will be determined by the weight of the shade.

Continuous Chain Operator (CCO) Lifting System: The Continuous Chain Operator (CCO) Lifting System is also available with a Safer Shade. The advantage of this system in a Safer Shade is that there are never any dangling cords. In addition, all CCO's come with a special, easy-to-install chain guard to prevent children from harming themselves with the chain loop.

Cord & Cleat (C&C) Lifting System (*with or without Cord Lock*):

These shades require a pull cord to lift a shade and a cleat to secure the shade in whatever position you want when raised.

They can also be made with a **Cord Lock** which can lock the shade into whatever position you require.

However, **all Safer Shade versions of these lifting systems require a cleat to wrap the excess cord around** to keep it out of reach of small children.

Dangling cords are a serious danger to small, unsuspecting children, and for their safety, all cords must be wrapped around the cleat which we provide.

MOTORIZED SAFER FOLDING SHADES

The ultimate in safety and convenience! With no dangling cords or chain loops, this lifting system insures that children will not get tangled up! To raise or lower a shade requires only the push of a button.

Motorized operating systems are available in a variety of configurations and price points to address a broad range of applications including Home Automation Systems.

WHO IS RESPONSIBLE FOR SAFETY?

Remind your customers that regardless of the lengths the window covering industry has gone to in making shades safer for small children to be around, *the primary responsibility for protecting children from danger lies with the parent.* **That responsibility includes making certain that any corded window covering product that does not meet safety standards, and even those that do, be kept out of reach of children.**

MANUAL CONTROL CONFIGURATIONS

Select your control configurations

Discover the difference these remarkable shade control configurations and operating systems will make in your home. Five manual control configurations are available to provide just the right choice for you.

Roman Shade

This is our traditional Roman Shade. Clean-lined, tailored and simple in design. This shade hangs flat when lowered and folds neatly in 5" to 9" folds when raised. Pull cord is concealed behind the shade for a clean appearance.

Roman Shade with Valance and Cord Forward

Operating cord is easily accessible in front of shade. Clean-lined, tailored and simple in design. This shade hangs flat when lowered and folds neatly in 5" to 9" folds when raised to almost disappear behind the 6" valance flap.

Top Down Shade

Designed for those who want privacy and a view at the same time. This unique shade operates in reverse, raising from tidy roman folds on the bottom to close at the top under the 6" valance flap. Operating cord is easily accessible in front of shade.

Top Down-Bottom Up Shade

Designed for complete privacy control. This shade can be lowered from the top so that you can see over it, and still have coverage at the bottom, or raised from the bottom like a standard shade, and stacked at the top. Operating cords are easily accessible in front of the shade. A lined 6" valance conceals the operating mechanisms.

DuoShade

Roman Shade and Roll Shade mounted on the same headrail. Each operates independently. Great for media and bedrooms where both room darkening and light access treatments are desired.

lifting systems guide

MANUAL LIFTING SYSTEMS

Our **STANDARD LIFTING SYSTEM** is a manual pull cord with a cleat to wrap the excess cord around when the shade is in an up position (for child safety). In addition, we offer continuous chain operating systems and motorization.

The weight-class of the shade will determine the lifting systems you might want to consider. To determine the weight-class of your shade, simply check the columns on the next page for the fabric you want to use.

A **CORD & CLEAT (C&C)** system consists of a manually-operated pull cord and a wall-mounted cleat to wrap the excess cord around to keep it out of reach of small children. The cost of this system is included in our price charts for shades.

The C&C is a very simple, reliable, and cost-effective lifting system requiring only 1½" depth for a standard installation and just ¾" depth for French door installations. It is limited only by the weight a person can comfortably handle in lifting a shade, which we have estimated for you in the table for Cord & Cleat on page 15.

A **CONTINUOUS CHAIN OPERATOR (CCO)** consists of a manually-operated continuous chain loop. It is simple and reliable, and comes with a wall-mounted chain guard for child safety. The chain is always the same length, so there is never a "cord puddle" when the shade is in an up position.

For most shades, a CCO will only require a 2½" headrail depth, but for heavier shades, you may need a heavy-duty CCO requiring a 3½" headrail. The CCO you will need depends on the weight-class of your fabric and the size of your shade. To determine the weight-class of your fabric, check the columns on the next page, then see the two tables for CCO's on page 15 to make your choice.

=====

MOTORIZED LIFTING SYSTEMS

MOTORS ARE EASY. A quick glance at the tables on page 15 will tell you how many square feet each motor can handle, how much depth you will need for installation, and any limitations a given motor might have.

Except for the Battery Motor and the Low Voltage Motor which requires no electrician or wires and is always operated by a remote controller, any of the motors can be either a Standard Motor or a Remote Control Motor.

MOTORIZED LIFTING SYSTEMS (continued)

REMOTE CONTROL MOTORS can be hardwired or they can simply be plugged into an existing electrical outlet. Plug-in cords of different lengths are available (see page 20).

Whether hardwired or plugged-in, these motors are operated by remote controllers. Remote Control Motors are the most widely used motors by far because of their convenience and ease of use. They can even be integrated into home automation systems.

BATTERY MOTORS are simple, easy to install, and do not require the expertise of an electrician. For these reasons, they are a popular motorization option. Ideal for smaller, lighter shades. The maximum width depends on the shade size and the weight of the shade material. Requires only 2½" depth for installation.

LOW VOLTAGE MOTORS have a greater weight capacity than Battery Motors (see above). The Low Voltage Motor is a remote control motor. Price includes a thin, unobtrusive, low voltage wire and plug-in transformer. Just plug it into any wall plug and you are ready to go. If you have multiple shades, we have distribution transformer panels that can accommodate as many as twenty motors. Requires only a 2½" depth for installation.

If your home is wired for low voltage home automation system, this motor can be wired directly into your system.

HEAVY DUTY MOTORS can handle any shade regardless of size and weight. See tables on page 15.

A 400 SERIES MOTOR is a smaller motor that uses a 1½" tube. This smaller tube makes it possible to install your shade in as little as 2½" of depth.

A 500 SERIES MOTOR is a very powerful motor that uses a larger tube requiring a minimum of 3½" installation depth. For larger oversized shades, a deeper installation depth may be required.

NETWORK/HOME AUTOMATION MOTORS include many options for seamlessly integrating the operation of window coverings with all home automation systems. Please call with details of your project and we will help you with the design of the system. Our Sales Services Department can be reached at 800.828.2500.

general pricing & information

The price charts in this price list are for manually operated NATURAL WOVEN SHADES with our standard lifting system, a manual pull cord with a cleat to wrap the excess cord around when the shade is in an up position.

For alternative lifting systems, including motors and continuous chain operators, see previous pages for information and see below for pricing.

MANUAL LIFTING SYSTEMS

Cord & Cleat (C&C)

Our standard lifting system is a manual pull cord and cleat with or without a cord lock. You must specify whether you do or do not want a cord lock. This system includes **a cord cleat to wrap the excess cord around for child safety** when the shade is in the up position.

- **No extra charge** (included in price charts for shades).

In addition to our standard cord and cleat system, we offer manual continuous chain lifting systems and motorization. These systems require deeper headrails, for which you will need more installation space. Use the following table below for guidance.

LIFTING SYSTEMS	HEADRAIL DEPTH
Cord & Cleat Lifting System	1½"
Continuous Chain Operator (CCO)	2½" - 3½"
Cordless Lifting System	2½"
Slide Winder Operator	2½"
Motorized Lifting System	2½" - 3½"

Braided Cords

- **No additional charge.** Available by request.

Continuous Chain Operator (CCO)

A Continuous Chain Operator, or CCO, is a hand operated mechanism with a continuous chain loop for lifting and lowering a shade. CCO's come in ivory or black, and the operating chains come in a variety of colors, which coordinates with the fabric selection.

- **\$162.00 per shade.**

Slide Winder Operator

Shades roll up evenly every time. Especially useful with long narrow shades where any unevenness is very noticeable.

- **\$182.00 per shade.**

Cords Forward

For convenience, particularly for inside mount shades, it is sometimes desirable to bring the operating cords forward, so they can be more easily reached. Cords will be routed through grommets in the face fabric, which are hidden by a 6" valance.

- **Add the valance surcharge** shown at the bottom of the Traditional Roman Shade Price Charts.

SPECIALIZED LIFTING SYSTEMS

Top Down-Bottom Up Shade

Shade stack can be moved to either the top or the bottom when the shade is open.

This feature can be added including motorization. A 6" minimum valance is required for this option.

- **Add the valance surcharge** shown at the bottom of the Traditional Roman Shade Price Charts.

Top Down Shade

Shade stack will be at the bottom when the shade is open. This feature can be added including motorization. A 6" minimum valance is required for this option.

- **Add the valance surcharge** shown at the bottom of the Traditional Roman Shade Price Charts.

CORDLESS SAFER SHADES

Cordless SAFER SHADES replaces cords with lift bands that cannot harm a child. This type of Natural Woven SAFER SHADE is only available with a Continuous Chain Lifting System or Motor. While they can work well in some circumstances and in some styles, **they have significant limitations.**

Before selling a Cordless Natural Woven SAFER SHADE, call our Sales Service Department at 800.828.2500 to see if they will work in your situation.

- **\$220.00 per shade.**

- Minimum charge **\$132.00**.

Curved or Arch Top Windows (requires a template)

- **Add \$85.00** per foot of shade width.

- **No charge**.

Multiple Shades on One Headrail

For situations where two or three windows are grouped in a single opening, all the shades can be mounted on one headrail. There will be a ¼" gap between each shade.

how to measure for natural woven shades

When measuring, please use a steel tape and clearly indicate width and height to avoid transposing measurements.

(Note: Give the width measurement first, followed by the height measurement.) Natural Woven Shades are generally fabricated to tolerances of approximately $\frac{1}{8}$ ". Please note that natural weaves may expand or contract depending upon environmental conditions. This may manifest itself in height changes under different heat and moisture combinations.

SELECT INSIDE OR OUTSIDE MOUNT

You will need approximately 2" minimum unobstructed window depth for an inside mount (check the headrail depth of your shade in the tables on pages 15 and 16). Inside mounts can provide a clean tailored look. Outside mounts can hide unattractive molding, or allow you to make a small window appear larger and more grand by increasing the overlap above the window.

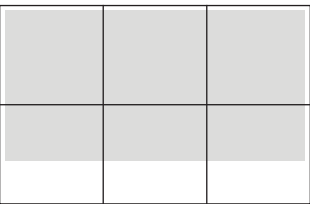

An outside mount is recommended if your window is out of square. To determine squareness, simply compare the diagonal window measurements. They should be the same. If they are more than 1" apart, consider an outside mount to hide the irregularity.

Note: If your shade is not motorized, consider cords forward for inside mounts so that the cord can be easily reached.

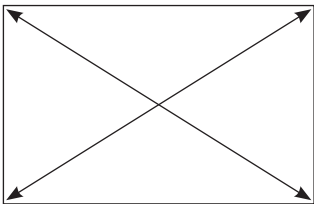

Inside Mount:

Measure the window opening width at the top, center, and bottom, recording the **narrowest** width. The shade will be made approximately $\frac{3}{8}$ " narrower than the width specified to allow operating clearance.

Next, measure the window opening height at left, center, and right. Record the **highest** measurement.

Inside Mount

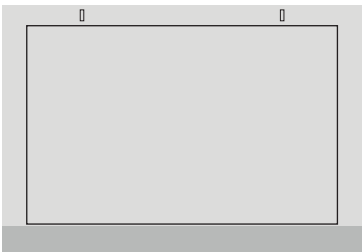

If diagonals match, window is square

Outside Mount:

Measure the opening width. If there is room, add at least 3" to each side of the window opening to reduce light gaps and maximize privacy.

Measure the opening height. Add a minimum of 3" to height to allow space for mounting brackets above the opening and then add as desired for overlap at the bottom.

- ← Overlap 3" at top to allow for brackets
- ← Overlap at least 1" to 3" on either side for privacy and light control
- ← As desired at bottom
