AVILA TWILIGHT & MAYA FABRICS

[New Specifications]

AVILA TWILIGHT & MAYA FABRICS

[Castec Solar Solutions™ Program]

The suppliers for *two* of our fabrics have changed the composition of these fabrics in a way that makes it impossible for us to provide you with some of the options that were previously available. The changes are as follows...

AVILA TWILIGHT (*Deck 43*, Blackout fabric)

- It is **no longer possible to weld this fabric**. Therefore, **it cannot be seamed**. Consequently, the maximum height of a given shade if you need to railroad the fabric is limited by its 118" width, which results in a maximum height of approximately 108" to 110".
- It is also **not possible to weld a hem pocket**. You can order a *sewn hem pocket*, or you can choose one or another of our *special bottom rail options* as illustrated on the following page.
- A **fire-retardant version of this fabric is available upon request** with an *upcharge* for treating the fabric. Unless you specify this feature, the fabric will not be fire-retardant.

MAYA (*Deck 8*, Blackout fabric)

- It is **no longer possible to seam this fabric**. Therefore, the maximum height of a given shade if you need to railroad the fabric is limited by its 110" width, which results in a maximum height of approximately 100".

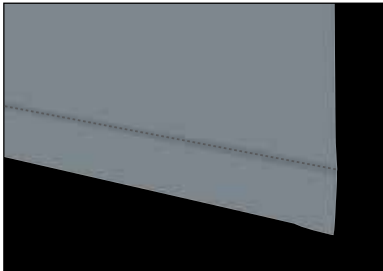

Please make a note of these changes in your Castec Solar Solutions™ Sample Book SWATCH DECKS and your ROLLSTAR™ Retail Price Lists.

If you have any questions, or would like a correction sticker for your swatch decks, call our Sales Services Department at (800) 828-2500. We are here to help.
